

RUS Dumitru (2012). *Caietul elevului. Geografie. Probleme fundamentale ale lumii contemporane, clasa a XI-a* [Student's Notebook. Geography. Fundamental Problems of the Contemporary World. 11th Grade]. București: Editura CD Press, 71 p., ISBN 978-606-528-148-6.

Student's Notebook. Geography. Fundamental Problems of the Contemporary World. 11th Grade, published at CD Press Bucharest and signed by Dumitru Rus, PhD, represents a helping hand for teaching, a training book meant to offer a real support in completing the contents of the curriculum.

In order to write this training support, the author took into account the Geography Curriculum for the 11th Grade as a whole (general skills, values and attitudes, characteristic skills, offered contents, methodological suggestions), while the structure and the content observed the methodological

suggestions from the above-mentioned curriculum. Thus, this notebook is adequate for any of the Romanian approved text books.

Due to the complexity of the presented problems, their opportunity and the way items are organized, the presented notebook represents a real useful working tool for students who can get closer to the exigency of the current examination and performance.

The subjects, the applications, and the developed tests represent a support for an objective assessment and for students' self-assessment and an adequate preparation for the upcoming evaluations than can take place during the entire school year and during diverse contests (National Olympiad of Geography, Interdisciplinary Olympiad The Earth's Sciences).

This notebook encourages active learning, students being permanently involved in leading lessons, thereby ensuring permanent

training achievement during Geography classes. It encourages students' better, easier, and more efficient learning in order to prove to students the importance of studying Geography, in general and "The Fundamental Problems of the Contemporary World" in particular.

The present work represents a novelty for Geography at the high school level, which is welcomed and useful for both teachers and students. It will definitely have a big contribution in improving the quality of the process of learning Geography.
